Sunil Kumar

Senior Digital Engineer | Agentic AI, Generative AI & Microsoft Cloud

Phone: 8427165985 | Email: 14bbt1019@gmail.com | GitHub: https://github.com/Sunil-kumar01

PROFESSIONAL SUMMARY

Digital engineering and AI-focused professional with 8+ years of combined experience across Microsoft cloud services, technical problem-solving, data science, and machine learning. Hands-on with Python application prototypes, LLM integrations, document extraction, retrieval-augmented generation (RAG), vector search, API troubleshooting, and cloud-based AI services. Combines customer-facing Microsoft technical experience with independently built AI document intelligence prototypes.

CORE SKILLS

AI application engineering: Python, Flask, Streamlit, REST APIs, JSON data contracts, document processing, application troubleshooting	**Generative AI & retrieval:** LLM prompting, RAG, LangChain, ChromaDB, Google Gemini, Ollama, Qwen 2.5, human-in-the-loop review
Cloud & technical delivery: Azure Cognitive Services, Azure OpenAI, Microsoft Marketplace partner workflows, API debugging, Postman, networking, VNet integration, incident management	**Data science & ML:** pandas, NumPy, scikit-learn, EDA, statistical analysis, classification, clustering, time-series forecasting
Data & reporting: SQLite, SQL, Power BI, Tableau, Excel, data quality, dashboards	

PROFESSIONAL EXPERIENCE

Microsoft Marketplace Partner Support | Sonata Software — March 2026–Present

- Support Microsoft Marketplace partners with technical and operational questions across offer setup, submission, validation, and publishing workflows.
- Reproduce and triage partner-reported issues, gather relevant diagnostics, explain technical next steps, and coordinate complex cases with internal teams.
- Track cases through resolution and capture recurring issue patterns and troubleshooting guidance to improve partner outcomes.

Senior Microsoft Support Engineer — Azure Cognitive Services | Sonata Software — December 2023–2025

- Troubleshot customer and partner integrations across Azure Cognitive Services, including Speech, Language, Vision, Decision, and Azure OpenAI-related scenarios.
- Investigated API behavior, service configuration, dependencies, networking, and VNet connectivity; drove incident and case resolution with technical stakeholders.
- Produced reusable technical troubleshooting guidance. Earned 8 monthly/quarterly awards, maintained a 4.97+/5 average customer rating, and advanced internally to Tier 2 support.

Data Scientist | Neostats Analytics Pvt. Ltd. — April 2023–July 2023

- Queried and analyzed Mashreq Bank personal-loan journey data with SQL and Power BI, investigating funnel drop-offs, data quality, and conversion patterns.
- Developed and evaluated logistic- and linear-regression prototypes to estimate customer conversion likelihood and support segmentation decisions.

Accenture Solutions Pvt. Ltd. — July 2017–December 2022

Data Labeling / Computer Vision Associate (July 2017–December 2019); Trust & Safety Associate / Data Science projects (December 2019–December 2022)

- Contributed to a self-driving vehicle computer-vision program through LiDAR and image annotation, data quality audits, human evaluation, and onboarding/training of new team members.
- Supported trust-and-safety analytics and ML workflows through data collection, cleansing, exploratory analysis, feature selection, classification, clustering, and model evaluation.
- Contributed to commodity-hedging analysis using time-series and machine-learning approaches, including ARIMA-family models, Prophet, XGBoost, and Random Forest; communicated findings through Power BI.

PERSONAL AI PROJECTS

Agentic AI POC — Vendor Invoice Compliance & Discrepancy Auditor
Engineered a Python/Streamlit invoice-document prototype: accepts a PDF, extracts selectable text with pypdf, sends it to a locally served Qwen 2.5 model through Ollama, and presents structured JSON invoice fields with missing or unclear information highlighted for human review. This is an AI-assisted prototype, not an autonomous approval or accounting control. **Stack:** Python, Streamlit, pypdf, REST/JSON, Ollama, Qwen 2.5. Public GitHub project.

AI-Powered Document Search POC
Built a Flask document Q&A prototype with PDF, Word, and PowerPoint ingestion, document text processing, retrieval-augmented question answering, and user/admin document-management flows. Used vector retrieval to ground responses in uploaded document content and an LLM integration for answer generation. **Stack:** Python, Flask, LangChain, ChromaDB, SQLite, Google Gemini. GitHub repository (private).

EDUCATION & PROFESSIONAL DEVELOPMENT

- B.Sc. Biotechnology, Chandigarh University — 2017 (75%)
- Data Science programs — Simplilearn; Full Stack Data Scientist program — AlmaBetter
- Generative AI with Large Language Models — Coursera; MLOps basics using AWS/Vertex AI; Data Science Basics — Programming Hub
